Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (21-MAR-2001) Sanger Centre, Hinkton, Cambridgeshire,
CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequesteGeanger.ac.uk

On Nov 20, 2000 this sequence version replaced gi:11137809.

During sequence assembly data is compared from overlapping clones,
Where differences are found these are annotated as variations
together with a note of the overlapping clone, as we submit sequences with
only a small overlap as described above.

The following abbrevations are used to associate primary accession
numbers given in the feature table with their source databases:
Em., EMBL; Sw.; SWISSPROT, Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/Celegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr6
IMPORTANT: This sequence is not the entire insert of clone
RP11-20312 It may be shorter because we sequence overlapping
sections only once, except for a 100 base overlap.
The true left end of clone RP1-328K6 is at 100321 in this sequence.
The true left end of clone RP1-328K6 is at 100 in this sequence.
The true left end of clone RP1-328K6 is at 100 in this sequence.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality as
compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 succlone; and the
new plasmid subclone or more than one M13 succlone; and the
secupressions and repeats; all regions yere covered by the Jone, here it branty RPC1-11.1 constructed by the group of Pieter de Jong.

IMPORTANT: This sequence is unfinished and does not necessarly represent the correct sequence.
Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continue. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage, etc.
The nucleotide sequence of this BAC clone was generated by combining Monsanto and Genoscope sequencing data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

IMPORTANT: This sequence is unfinished and does not necessarly
represent the correct sequence.

Work on the sequence is in progress and the release of this data is
based on the understanding that the sequence may change as work
continue. The sequence may be contaminated with foreign sequence
from E.coli, yeast, vector, phage, etc.

NOTE: This is a 'working draft' sequence.

* This sequence will be replaced

It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be
                                                                                                                                                                                          HTG 30-MAY-2000
                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhin; Hominidae; Homo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (10-MAR-2001) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On May 24, 2001 this sequence version replaced gi:13270626. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: This is a 'working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

153485: contig of 153485 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                     50428

Center clone name: 252E08

Center clone name: 252E08

Sequencing vector: plasmid, n/a; 100% of reads
Sequencing vector: plasmid, n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consenus quality: 147596 bases at least Q40
Consenus quality: 147747 bases at least Q20
Insert size: 135000; agarose-fp
Insert size: 149367; sum-of-contigs
Quality coverage: 10.56x in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          * NOTE: This is a 'working draft' sequence. It currently consists of 5 conigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9119 9218: contig of 9118 bp in length

Submitted (13-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire, Cubmitted (13-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerquest@sanger.ac.uk

On Mar 11, 2001 this sequence version replaced gi:12961937.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given
                                                                                                                                                                  GRSKRNKTEQYLKEWVASNGNQKRERLEDSIPDLPENREAREFLRNAPTKGLHQPLGK
